### Presentation

The **N2C 2013** is primarily intended for postgraduate (PhD or MSc) students, postdocs and researchers investigating Computer Science. Leading researchers from academia and industry will cover theoretical and practical aspects pertinent to Information Systems, Communication Networks and Computing Technologies.

Participants will have the opportunity to present their work and obtain feedback during a dedicated session intended to further facilitate interactions and the exchange of ideas.

This school addresses these major scientific problems with deep industrial issues, economic and societal far beyond the communications networks of their role in the evolution of our modern societies.

The 2013 edition will propose a set of tutorials and technical presentations made by acting as authoritative by their scientific expertise internationally recognized by their teaching skills. This cycle of tutorials and lectures will be complemented by a session in which each senior researcher briefly present his vision of the future research as well as a poster session devoted to the work of all young researchers participating in the 2013 edition.

The N2C summer school is open to students from different backgrounds and levels connected to communication, Networking and Software Engineering.

The target audience ranges from Ph.D. students to Master and engineering students. Researchers and engineers from companies are welcome, and may greatly benefit from the broad vision provided by this Summer School.
